- Is your organisation managing its stock inventory to remain 'out of scope' of the Control of Major Accident Hazards (COMAH) regulations?
- Do you understand why you do this?
- Do you know if you are doing it correctly?
- Do you understand the implications if you get it wrong?

This best practice workshop will provide a step-by-step insight into the calculation process. It will begin at a basic level to increase awareness of the provisions and build further using examples to illustrate the pitfalls and difficult aspects of the process.

COMAH is a strict regime and requires a level of knowledge and commitment above that of general health and safety. Understanding the potential impacts is key to managing a site or remaining outside the regime whilst operating safely.

The workshop is suitable for all levels of personnel requiring a practical knowledge of calculation rules and process.

The workshop provides a basic insight into aspects of the Control of Major Accident Hazards regulations in the UK including:

- **Why the COMAH regulation exists**
- **The scope of the COMAH regime**
- **COMAH Threshold calculations**
- **How do I know what substances are involved**
- **How to actively manage inventory of hazardous goods**
- **Understand the implications of being in scope or moving from Lower Tier to Upper Tier**
